CAR COMPUTER

1. The files that will be served should be put within /shared_folder/serveFile (Please Note: you don't have to worry about the images being erased after the containers are executed)
2. Currently, the send address as text program is included. If you wish to get rid of it:
   a. Comment out the docker run "send" container in connect.sh
   b. Comment out docker build "send" container in setup.sh
3. If you wish to keep send address as text program
   a. Go to SendTXTAddress directory, enter sendTXT.sh and insert the appropriate HOST and PORT
4. Execute: bash setup.sh or ./setup.sh to build all of the CAR docker containers
5. Execute: bash connect.sh or ./connect.sh to execute all of the CAR docker containers
